

•••INSTALLATION INSTRUCTIONS FOR LARGE SCALE GRAPHICS•••

It really is easier than it looks! Just make sure to have a clean, DRY(!) surface, and if your decal is large, a second pair of hands will make it easier (and more fun) to install.

● **STEP 1 :: USE THE PROVIDED TEST DECAL.**

Practice with the test decal. Make sure the decal will work on your desired surface. Note: Wait 3-4 weeks for freshly painted walls to set, before applying any decal.

● **STEP 2 :: PREPARE THE SURFACE**

Clean the surface you want to place the vinyl decal. The area must be completely free of dirt, dust, and grease for the decal to adhere properly. *On many walls using water with a little bit of dish-soap will suffice. Allow the area to DRY completely.*

● **STEP 3 :: GO OVER THE DECAL WITH A CREDIT CARD**

To ensure that the decal is properly stuck to the transfer tape covering before installing the decal, take a squeegee application tool (or credit card) and press firmly over the whole surface of the face of the decal while it is laying flat on the table

● **STEP 4 :: IF YOUR DECAL COMES IN MULTIPLE PIECES...**

Layout the decal pieces so that you can see the entire image together. This makes sure you put the right pieces where they should be. If you forget what your image is supposed to look like, refer back to my website or your order for a picture.

● **STEP 5 :: REMOVE BACKING PAPER**

Begin to peel the wax paper backing off the decal very slowly (exposing the sticky

side to the decal). Do this **slowly** and in a **downward direction**, keeping the wax paper as **close to parallel with the image** as possible (this keeps the decal from pulling up). If there are any parts of the decal coming up with the wax paper, use a tool (like a toothpick) to gently separate the decal from the paper.

● **STEP 6 :: INSTALLATION**

Stick the decal on your desired location with the transfer paper sticky side down on wall. Make sure the decal is laying flat on your desired surface.

Once the entire sticky side of the decal is applied to the surface, go over the decal with a credit card one more time with harder strokes.

● **STEP 7 :: REMOVE TRANSFER TAPE**

Begin peeling the transfer tape slowly and close to the surface, making sure your decal doesn't peel up with it.

TIP: Just as before, pull it off in a **downward direction**, keeping the clear transfer tape as **close to parallel with the image** as possible (this keeps the decal from pulling up).

This will also keep bubbles from forming between the decal and the surface. Any small bubbles can be removed by poking them with a needle, then pushing air out and smoothing out the top surface of the decal.

● **STEP 8 :: ENJOY YOUR NEW WALL DECOR!!!**
