

•••INSTALLATION INSTRUCTIONS FOR SMALL GRAPHICS•••

- **STEP 1 :: PREPARE THE SURFACE** (Note: wait 3-4 weeks for freshly painted walls to set before applying any decal).

Clean the surface you want to place the vinyl decal. **Use the test decal provided to make sure the decal will work on your desired surface.** The area must be completely free of dirt, dust, and grease for the decal to adhere properly. **Allow the area to DRY completely.**

- **STEP 2 :: GO OVER THE DECAL WITH A CREDIT CARD**

To ensure that the decal is properly stuck to the transfer tape covering before installing the decal, take an application tool (like a credit card) and press firmly over the whole surface of the face of the decal while it is laying flat on the table

- **STEP 3:: REMOVE BACKING PAPER**

Peel the wax paper backing off the decal very slowly (exposing the sticky side to the decal). Do this **slowly** and in a **downward direction**, keeping the wax paper as **close to parallel with the image** as possible (this keeps the decal from pulling up). If there are any parts of the decal coming up with the wax paper, use a tool (like a toothpick) to gently separate the decal from the paper.

- **STEP 5 :: INSTALLATION**

Stick the decal on your desired location with the transfer paper sticky side down on wall. Once the entire sticky side of the decal is applied to the surface, go over the decal with a credit card one more time with harder strokes.

- **STEP 6 :: REMOVE TRANSFER TAPE**

Begin peeling the transfer tape slowly and close to the surface, making sure your decal doesn't peel up with it. **TIP:** Just as before, pull it off in a **downward direction**, keeping the clear transfer tape as **close to parallel with the image** as possible (this keeps the decal from pulling up). This will also keep bubbles from forming between the decal and the surface. Any small bubbles can be removed by poking them with a needle, then pushing air out and smoothing out the top surface of the decal.

- **STEP 7 :: ENJOY YOUR NEW DECOR!!!**
